

MacLogger DX Represents the file within which a looger program keeps track of the QSOs. This model will show the system extracting the relevant information from the logger file into "HARC SNN QSO Information".

This could just as easily be done by creating a view into the logger file that accomplishes the same task; extracting only the data needed to run the Sunday Night Net System. A view will be created from "HARC SNN QSO Information" for this iteration

HCOL Export is the result of exporting the member roster from Ham Club Online. The export is in comma separated variable (CSV) format and is imported into the database of choice.
