

Maclogger DX

MacLogger DX Represents the file within which a looger program keeps track of the QSOs. This model will show the system extracting the relevant information from the logger file into "HARC SNN QSO Information".

This could just as easily be done by creating a view into the logger file that accomplishes the same task; extracting only the data needed to run the Sunday Night Net System. A view will be created from "HARC SNN QSO Information" for this iteration

HARC SNN QSO Information		
P *	QSO Key	number
	call	callsign
	contest id	character (20)
	first name	Person Name
	last name	Person Name
	qso start	date
🔑 QSO Primary Key (QSO Key)		

Call-out Cutoff Days
